

Bluedrop's **Learninglogics® Learning Management System (LMS)** is an easy-to-use software application for managing the delivery of training and student performance management that uses trending and analytics to inform training decision making.

Key Benefits:

- Suited to the training needs of a wide range of organizations
- Easy to use and can be customized to manage and control any size and type of learning environment.
- Provides enrolment capabilities.
- Creates and maintains user records.
- Designs and launches e-learning courses.
- Offers records and content keeping, and virtual classroom management.

This truly flexible system can be customized to manage and control any size and type of learning activity. The LMS enables instructors to organize students and track the progress of e-learning courses and classroom courses using an intuitive user interface.

Reporting/Trending –

Performance management and trending to inform training decision-making.

Web-Based System – A

completely web-based system that can be server or cloud hosted.

Multi Language Support

– Allows for multiple language types including French, English and Arabic. All other languages can be easily added and supported.

Highly Configurable –

Allows instructor to have complete control over the learning environment for easy management of student enrolment, learning progress and course reporting.

Scalable – The LMS is highly scalable and can be easily expanded depending upon types and levels of training, size of student population and course content.

Standards Based –

Certified to SCORM, xAPI and CMI5 industry standards for e-learning.
