

# Virtual Ship

Explore Bluedrop's vShip Virtual Platform.

The V-Ship Virtual Platform, an immersive training system featuring the Royal Canadian Navy's joint support Ship (JSS). This virtual platform allows users to explore the JSS in a realistic virtual environment, with over 400 individual compartments and exterior spaces. The interface, designed with gamers in mind, is intuitive and immediate.

The V-Ship Virtual Platform offers two main modes of exploration: a scenario mode with step-by-step training activities, and a free roam mode for unguided exploration.

Additionally, users have access to 2D schematics for orientation and contextual understanding of the ship.

This immersive training can take place anywhere using a laptop. While initially featuring the JSS, the V-Ship Virtual Platform can be applicable to any ship or platform in a virtual environment.

Bluedrop Training and Simulation's V-Ship Virtual Platform represents the next step in immersive training environments, providing an unparalleled level of realism and interactivity for trainees.
